

iRegions

Internet-based and mobile technologies for regions in the net economy

Newsletter 6 February 2011

## iRegions presented at next TCI conference in Tallinn, Estonia, 30-31 March 2011

The Baltic Innovation Agency is organizing the event. The iRegions project partners will present progress from the project and discuss the three selected tools chosen within the project as means to improve the competitiveness of the clusters: Living Labs, Leading Edge Areas, and Ecosystems for Growth.

TCI is the global practitioners network for competitiveness clusters and innovation. This first TCI European regional conference will focus on how to improve Cluster policies on a European, a national and a regional level and on how to achieve excellence in cluster management. Representatives from all over Europe are expected to present and attend the conference, but speakers also include guests from the Harvard Business School in the USA.

For more information about the conference, visit:
